Announcement of CE Marking

PicoTherm's "NanoTR" thermal analysis systems for thin films are the world's first analyzers to provide high precision measurements of thermophysical properties of metallic, oxide, organic and other films. These analyzers enable rapid and highly precise measurements of thermal diffusivity, thermal effusivity, thermal conductivity and interfacial thermal resistance for films as thick as several 10s of μm and as thin as several 100s of nm, formed on any substrate.

"NanoTR" thermal analysis systems for thin films meet all the necessary requirements of the applicable EU legislation and directives.

CE Marking

CE marking is a standard mark that certifies that the product on which it is placed meets EU safety, health or environmental requirements for trade on the single market in the European Economic Area (EEA). CE marking shows that the product conforms to essential product-specific requirements set forth in EU Directives and Legislation. Products properly bearing the CE marking are ensured to be valid for sale and free movement within the European market.
